

Lab 4: Pipeline w/ forwarding, hazard handling

Start Assignment

- Due Jul 16 by 5pm
- Points 100
- Submitting a file upload

(<https://canvas.calpoly.edu/courses/186931/files/21847847/download?wrap=1>) [Lab Activity 2-2.pdf](#) (<https://canvas.calpoly.edu/courses/186931/files/21847967/download?wrap=1>) [↓](#) (https://canvas.calpoly.edu/courses/186931/files/21847967/download?download_frd=1)

On the report :

1. add the students' names in your group and a Table of the **tasks each group member** performed.
2. contributions of every team member
3. All project files (as a zip file so it can be recreated)
3. Describe the design decisions the team took
4. Prove that it compiles, synthesize to the board by running the long Test_all software that turns LEDs on the board on and off; you can make a video of your project compiling, simulating /creating correct waveform and on the board or you can schedule a demo with me or the TA

Lab 2 Rubruc

Criteria	Ratings	Pts
Summary of Project Design Detailed description of development process and design of pipeline. In what order did you implement changes incrementally? What bugs did you encounter, and how did you fix them?		20 pts
Verilog Code All new System Verilog code modules created or edited for this assignment. Must be well formatted and commented.		30 pts
Verification Some kind of way to verify/demonstrate that the pipeline works as intended. Possibly a test program waveform.		40 pts
Performance Benchmark Comparison Comparison of pipelined otter with data collected from lab0 on the following: 1. Speedup 2. Matrix benchmark programs completion time 3. Area and power		10 pts
Total Points: 100
